Art Unit: 3663

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 5, 8-9, 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stark et al in view of George et al, Slocum et al and Takahashi et al.

Stark et al discloses a substantially similar system including conveying module 20a with load locks 40a, 40b having sidewall connections to workstation modules 31c, 31b which also have plural sidewall connections. The modules are exchangeable (re, col. 4 lines 6-46, col. 6 lines 40-54). Stark et al do not disclose the use of kinematic coupling elements. The use of kinematic coupling elements is conventional in the art as disclosed by George et al (element #14, #15, #16, #17) and Ieys Slocum et al. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide Stark et al with such coupling. The motivation is to provide easier exchange of modules. Takahashi et al disclose various modules configurations.
